Description

Ultra-fine keratin fibres that blend seamlessly with your hair, for a thicker, fuller looking head of hair in seconds.

Imagine if you never had to worry about the appearance of thinning hair again? You can regain that great feeling of confidence you had years ago when a full head of hair was something you took for granted!

Easy to Apply

Nanofibres are applied quickly and without mess by simply shaking the unique container over thin or thinning hair. This releases thousands of microscopic colour-matched hair fibres, which bind electrostatically to, and branch off of, each individual hair.

Charged with static electricity, they bond to your own hair in fir-tree patterns, creating a natural looking and natural feeling density. Nanofibres bond to your hair so securely they will stay in place all day, and will not stain or smear. Nanofibres will even resist strong winds, rain, and swimming when combined with Locking Mist Plus.

Undetectable, Natural Appearance

Nanofibres actually merge with your own hair, adding real volume, allowing styling like you never again thought possible. Every time you look in the mirror you will be truly amazed by the natural results that are virtually undetectable to the naked eye.

You can even build up the amount of Nanofibres you use over time to create a gradual transformation. Nanofibres can also be used before hair transplants to subtly build up the appearance of thicker hair so the transplants don't cause an obvious and sudden change.

Not only do Nanofibres look natural, the container is elegant and discreetly makes no mention of hair camouflage at all.

Patent Pending Technology

Nanofibres benefit from a patent pending Electrostatic Coating and Electrostatic Strip. These innovations intensify the hair thickening effect created by Nanofibres. Nanofibres have been independently proven to create unrivalled hair density you can really see. The Nanofibres jar also has fill-level windows to indicate when you are running low, to ensure you never run out.

100% Safe for Male and Female Thinning Hair

Over 1 million incredible transformations prove that Nanofibres are safe. They are completely natural and they will not damage your hair or scalp. That's why they are used by leading hair transplant surgeons to conceal thinning hair right up to surgery, and afterwards to hide the healing wounds. Nanofibres are recommended by the Alopecia Society for men and women with thinning hair.

Complete Hair Camouflage

Combine Nanogen Conceal & Style products to thicken any area of thinning hair. First apply Aquamatch directly to the scalp as a subtle base layer to conceal scars, hairlines and wide partings. Then apply and blend in Nanofibres for real hair density. Secure them in place all day through wind, rain, perspiration and even underwater with Locking Mist Plus.

-
1. For best results, first cleanse the hair using Hair Prepare and then either Daily Volume or Follicle Defence.
 2. Allow hair to dry completely, and if you use Aquamatch apply this now, before applying Nanofibres.
 3. Hold the jar at a slight angle and lightly shake small amounts of Nanofibres evenly over the thinning area.
 4. Blend the fibres gently into place using your fingertips.
 5. Repeat steps 3 and 4 until you have perfect coverage, you can also blend different colours for highlights or greying hair.
 6. Apply Locking Mist Plus to bind Nanofibres even more securely and make them water resistant.
-

- Natural Keratin
Perfectly mimics your natural hair
 - Electrostatic Coating
Ensures a strong bond all day
 - Colour Lock System™
Prevents any colour running, marking or staining.
